Christmas Evergreens Care and Handling

Here are a few tips to keep your products fresh on display, and in your home.

1. Upon receiving your product, gently shape and re-fluff it to achieve your desired appearance. This helps restore its original form after traveling from our farms.
2. Place the product out of direct sunlight (if possible) and away from heat sources. They will dry out more quickly in warm environments, and the sun can burn the product. The commonly advertised “garland on a mantle above a fireplace”, although beautiful, will dry it out very quickly!
3. Bouquet Grade and Bulk products should receive a fresh cut after purchase, and before going into a vase or centerpiece. Change the water and re-cut stems every few days.
4. To extend the lifespan of the evergreens, periodically spritz the product with water. This helps maintain moisture levels and keeps the foliage fresh and vibrant.
